

WHAT IS CLAIMED IS:

1. A system of identification labeling, the system comprised of:
a faceplate having a recess of a predetermined depth to accommodate a first label;
and
a label cover attached to the recess, the label cover having a compartment to accommodate a second label.
2. The system of claim 1, wherein the first label is positioned in the recess.
3. The system of claim 1, wherein the second label is positioned in the compartment.
4. The system of claim 1, wherein the label cover has an opening.
5. The system of claim 4, wherein a transparent protective faceplate is located within the opening in the label cover.
6. The system of claim 1 wherein the label cover is made of a transparent material.
7. The system of claim 1, wherein the recess is formed by a bottom wall, a pair of end walls, and a pair of sidewalls.
8. The system of claim 7, wherein the label cover is attached by a hinge mechanism to one of the end walls forming the recess.
9. The system of claim 1, wherein:
the compartment in the label cover includes a pair of opposed guide members that at least partially define the compartment and define a slot for retaining a label; and
the second label is positioned in the slot.
10. The system of claim 9, wherein:
the label cover has a length; and
the guide members extend longitudinally along the length of the label cover.

11. The system of claim 8, wherein the hinge mechanism is comprised of:
the label cover that includes at least one latching leg extending therefrom; and
the recess that includes at least one retention ledge that is complementary to the at least one latching leg.
12. The system of claim 11, wherein the at least one latching leg includes a beveled surface for facilitating latching of the latching leg behind the at least one retention ledge.
13. The system of claim 1, wherein the label cover has a thickness that is substantially the same as the depth of the recess.
